Growing Tips for ARTIST®

- Requires high light in production.
- Requires early growth regulator.
- Needs 200 ppm fertilizer for optimal growth.

Additional Culture Information for ARTIST®

pH/EC:	5.8 - 6.2 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	65-72°
Holding Temperature:	50-60°
Water Requirements:	Moderate to Moist
Planting and Timing:	Early Spring through Summer Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 4-6; for 6"/gallon, 5-7; for 8", 7-9; for 10-12", 10-12
Spring Outdoor Finish:	Last to go outside

Notes:

Pinching is not recommended. A light Sumagic® spray (2-5 ppm) or B-9 (2500-5000) has been shown to be effective on Ageratum. Growth can also be controlled using holding temperature. Winter flowering occurs in Sunbelt states.

How We Help You Boost Sales

Smart Plant Tags

We've added **Quick Response Codes** to our plant tags, so that customers can use their smart phones to get more information on Proven Winners plants. All they have to do is scan the code and they'll be able to view consumer ratings, growing tips, design ideas, and awards for that particular plant so they can validate their buying decisions while in your garden centre. And thousands of them are taking advantage of this technology, with more than 19,000 codes scanned last season. To be sure these codes are visible to the consumer, make sure you use branded containers and tag locks, so the codes don't get buried directly in the soil.

It is important to use the tag locks to assure the QR codes are not buried in the soil.

Take Action:

Make sure you or your wholesale grower does not bury the code in the soil – but instead utilizes the tag locator slot – keeping the QR code visible on the retail bench.

ANGELFACE® Angelonia hybrids

Angelface varieties are prized as vertical accent plants everywhere. Undoubtedly the finest Angelonia on the market, Angelface varieties are semi-upright with a good branching habit, have extra large, brilliantly colored blooms, and thrive in hot, humid conditions. These beauties make the perfect summer gallons.

Growing Tips for ANGELFACE®

- Requires high light in production.
- Needs 150-200 ppm fertilizer for optimal growth.
- Warm and slightly dry conditions after transplanting speeds root-in and growth.
- Blue is more compact and 1-2 weeks earlier to flower than others in the series.

Additional Culture Information for ANGELFACE®

pH/EC:	5.8 - 6.2 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	70-75°
Holding Temperature:	60-65°
Water Requirements:	Moderate to Moist
Planting and Timing:	Late Spring through Summer Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 5-7; for 6"/gallon, 7-8; for 8", 7-9; for 10-12", 10-14
Spring Outdoor Finish:	Do not finish outside

Notes:
Pinch 6" or larger pots at transplant for large plugs, 2 weeks after transplant for smaller pots. Florel® causes tip burn and distorted growth. Sumagic® is effective (2-5 ppm), but other growth regulators can delay flowering.

AWARD WINNERS

ANGELFACE® Angelonia

SLIGHTLY STRAWBERRY™

Anisodonteia hybrid

This drought-tolerant annual shrub features deep pink Hibiscus-like flowers and silver green foliage. A vigorous grower, Slightly Strawberry likes even moisture but doesn't need lots of fertilizer. Blooms best in cool nights. Great in the landscape or as a centerpiece in mixed containers.

Growing Tips for SLIGHTLY STRAWBERRY™

- Requires high light for production.
- Prefers cool night temperatures.
- Pinch twice. First at liner planting and then 4-5 weeks later.

Additional Culture Information for SLIGHTLY STRAWBERRY™

pH/EC:	6 - 6.5/6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	65-72°
Holding Temperature:	40-50° outdoors
Water Requirements:	Moderate to Moist
Planting and Timing:	Early Spring through Summer Finish. 1 liner per 6" pot; 1-3 liners per 8-10" pot.
Finish Time in Weeks:	For 4-5", 4-6; for 6"/Gallon, 6-8; for 8", 7-9; for 10-12", 10-12
Spring Outdoor Finish:	Do not finish outside

Notes:
Watch for aphids, whiteflies, and spider mites.

AWARD WINNER
SLIGHTLY STRAWBERRY *Anisodonteia*
Excellent Rating, University Laval

SLIGHTLY STRAWBERRY™ *Anisodonteia hybrid* "Naamling" USPP21393

Attention Southern Growers...
Slightly Strawberry blooms best in regions of the country with cool nights. As a result, this plant will stop flowering in the summer in those areas of the southern U.S. where high humidity keeps night temperatures high. For best results, grow the plant in frost-free areas during the cooler months of the year when nature works to help prolong flowering.

BUTTERFLY and MOLIMBA®

Argyranthemum frutescens

Our Marguerites continue to set the standard for bloom production, heat tolerance, and versatility.

Growing Tips for Argyranthemum

- Requires high light in production.
- Needs 200 ppm fertilizer for optimal growth.
- Low light, tight spacing, and wet foliage will lead to disease.
- Prior to mid-March, a pinch may be beneficial on 4-5" pots. After mid-March, a pinch should not be necessary on 4-5".
- Transplant Argyranthemum liners first, then water in quickly after transplant.

Additional Culture Information for Argyranthemum

pH/EC:	5.8 - 6.2 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	60-65°
Holding Temperature:	40-50° outdoors
Water Requirements:	Moderate to Moist
Planting and Timing:	Spring through Summer Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 5-7; for 6"/gallon, 7-8; for 8", 7-9; for 10-12", 10-14
Spring Outdoor Finish:	First to go outside

Notes:
Single plant 6" and gallons and all 8" and larger should be pinched once plants are actively growing. 5-10 ppm Sumagic® spray or a 1-3 ppm Bonzi® drench will help control growth. Winter flowering occurs in the Sunbelt states when grown under long days.

GOLDILOCKS ROCKS®

Bidens hybrid

Constant summer flowering in a semi-double bloom makes Goldilocks Rocks spectacular, and its compact, trailing habit creates exceptional hanging baskets and combos. Excellent for small pot production but will reach a good size for consumers.

Peter's Gold Carpet
Bidens ferulifolia ^{Goldilocks®} USPP12880 Can1708

Top 50
P. Allen Smith
Platinum Collection

- Growing Tips for Bidens**
- Requires high light in production.
 - Needs 150-200 ppm fertilizer for optimal growth.
 - Goldilocks Rocks is much more compact than Peter's Gold Carpet.

Additional Culture Information for Bidens

pH/EC:	5.5 - 6.2 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	55-65°
Holding Temperature:	40-50° outdoors
Water Requirements:	Moderate to Moist
Planting and Timing:	Early Spring through Fall Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 4-6; for 6"/gallon, 5-7; for 8", 7-9; for 10-12", 10-12
Spring Outdoor Finish:	Second to go outside

Peter's Gold Carpet

Bidens ferulifolia

Masses of large, sweetly scented flowers the colour of antique gold make Peter's Gold Carpet a 24-karat choice for beds, hanging baskets, and combos.

SUNDAZE®

Bracteantha bracteata

The finest Strawflower series of all time, compact Sundaze varieties bloom early and are covered with flowers all season. Incredibly sun and heat tolerant.

Growing Tips for Sundaze®

- Requires high light in production.
- Needs no more than 150 ppm fertilizer for optimal growth.
- Run this plant lean and dry for best results.
- Water on flowers will prevent flower expansion, so water early in the morning at retail to allow flowers to open for morning sales.

SUNDAZE® Flame
Bracteantha bracteata ^{Flame®} USPP16950 Can2531

SUNDAZE® GOLDEN BEAUTY®
Bracteantha bracteata ^{Golden Beauty®} USPP15928 Can2257

Additional Culture Information for Sundaze®

pH/EC:	5.5 - 6.2 / < .6
Rooting Out Temperature:	65-72°
Growing Temperature:	55-65°
Holding Temperature:	40-50° outdoors
Water Requirements:	Dry to Moderate
Planting and Timing:	Early Spring through Fall Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 4-6; for 6"/gallon, 5-7; for 8", 7-9; for 10-12", 10-12
Spring Outdoor Finish:	Last to go outside

Notes:

No pinching needed for small pots; larger pots may need to be pinched. Sumagic® at 5-10 ppm is effective. Cool temperatures, high light, dry soil, and low feed will effectively control growth. Downy Mildew can be a problem, so preventative sprays are recommended. Increased air circulation and watering in the morning will also help control mildew. Winter flowering occurs in Sunbelt states.

AWARD WINNER

SUNDAZE® *Bracteantha*

Including: Best of Breed, North Carolina State;
Consumer Preferred Variety, Ohio State

Compatible to grow with:

Supertunia® Superbena® New Wonder®

SUPERBELLS® Double Calibrachoa hybrids

🪴 🌱 🌿 6-10" 🌸

This quartet of double-flowering Superbells is a Canadian exclusive. These beauties have the same growth habit and vigour that growers have come to appreciate from Superbells but add a unique flower form and vibrant colour palette to the series. Superbells are already a consumer favourite, and this quartet doubles their popularity.

NEW

SUPERBELLS® Double Plum
Calibrachoa hybrid *** CanPBRAF

Double Plum boasts beautiful reddish-purple blooms that are magnificent alone or in combination with other medium-vigour plants. New this year.

SUPERBELLS® Double Rose
Calibrachoa hybrid *** CanPBRAF
A bright pink double bloomer.

SUPERBELLS® Double Lavender
Calibrachoa hybrid *** CanPBRAF
Lavender never looked so lovely.

SUPERBELLS® Double Ruby
Calibrachoa hybrid *** CanPBRAF
The deep red is as eye-catching as the flower form.

NEW

SUPERBELLS® Lemon Slice
Calibrachoa hybrid *USCAL8750Z* USPPAF CanPBRAF

SUPERBELLS® Lemon Slice *Calibrachoa hybrid*

The unique colour pattern of Lemon Slice has never been seen in a Calibrachoa, and it is sure to capture gardeners' attention and imagination for spring 2013 and many seasons to come. With the same superior performance and disease resistance of other Superbells®, this beauty has a mounding habit that is most similar to Dreamsicle. Great in Grande™ containers, hanging baskets, or combos with other medium-vigour varieties. New this year.

SUPERBELLS® Cherry Star
Calibrachoa hybrid *USCAL9100Y* USPPAF CanPBRAF

Top 50

SUPERBELLS® Cherry Star *Calibrachoa hybrid*

When you have a truly unique plant that looks beautiful and has exceptional performance, it will fly off the retail bench. That was the case with Cherry Star, which last year was the top-selling Superbells® in its first year of introduction. Its popularity is sure to continue to grow this year, along with Lemon Slice, another Superbells plant with breakthrough genetics and an introduction for 2013.

Compatible to grow with:

Supertunia®

Superbena®

Sweet Caroline

SUPERBELLS® Calibrachoa hybrids

Superbells' superb colour, heat tolerance, disease resistance, and large blooms make this series a star performer. With growth habits that range from the small and compact to the cascading, Superbells create endless possibilities in the landscape and in containers as you can see in the many combinations shown here.

Growing Tips for SUPERBELLS®

- Preventive fungicides are recommended at transplant.
- Requires high light in production.
- Needs 200 ppm fertilizer for optimal growth.
- Keep pH between 5.5 and 5.8.
- Yellow tips are often an indicator of high pH.
- Blue has a tendency to stretch under low light conditions.
- Red and Cherry Red are very responsive to PGRs, so lower rates should be used.
- Cold is a good natural growth regulator.
- Blue, Scarlet, Tequila Sunrise, Peach, and Dreamsicle have upright growth habits in lower light early production and may require extra pinching and PGR.

Additional Culture Information for SUPERBELLS®

pH/EC:	5.5 - 5.8 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	55-65°
Holding Temperature:	40-50° outdoors
Water Requirements:	Moderate to Moist
Planting and Timing:	Early Spring through Fall Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 4-6; for 6"/gallon, 5-7; for 8", 7-9; for 10-12", 10-12
Spring Outdoor Finish:	Second to go outside

Notes:

For pots 6" and smaller, pinch at transplanting only. For hanging baskets and pots larger than 6", soft pinch at planting and trim around pot just prior to hanging. 5-10 ppm Sumagic® or a B-9/Cycocel (2500/750) tank mix is effective. Use 500 ppm Florel® on baskets and larger pots to promote branching. Calibrachoa are sensitive to pythium, phytophthora, and thelaviopsis, but Superbells have higher levels of tolerance to these diseases. Proper pH and good sanitation practices help alleviate problems. Increased air circulation, proper water management, and good soil porosity are also critical. Scout regularly for aphids, especially in baskets.

Superior Rating, Penn State; Best of the Best,
University of Georgia; Best Calibrachoa, Colorado
State; Leader of the Pack, North Carolina State

Reduce pH in Hanging Baskets

Generally in cold, cloudy weather you want a Cal-Mag blend of fertilizer with high nitrate nitrogen, as this grows a better plant in winter conditions. Use a high ammonium nitrogen fertilizer to slowly lower media pH, but there is a catch. Under winter's low light and temperature conditions, high ammonium fertilizers can cause ammonium toxicity and cause the crop to grow too fast (meaning more PGRs will be required). Quick changes in pH usually cause additional problems. Other ways to reduce pH are to add more acid to your fertilizer injector and increase the overall acidity, but use care as you can also cause precipitation of some of the fertilizer elements if not handled properly.

Easiest Superbells to Grow

Propagators recommend the following Superbells varieties as easiest to grow in a 4.25 container:
Apricot Punch
Cherry Blossom
Coralberry Punch
Peach
Pink
Red
Sweet Tart
White

SUPERBELLS® Punch Calibrachoa hybrids

SUPERBELLS® Grape Punch

No Calibrachoa has the visual impact of our Superbells Punch varieties. The velvet black eye adds an element of tapestry and drama to the bloom and gets the attention of consumers. The Punch series has the same extraordinary performance and growth habit of all Superbells with a truly unique colour.

How We Help You Boost Sales

Top-selling, Consumer-rated Plants

Consumers are increasingly making buying decisions based on reviews from other consumers. We have a rating mechanism on the Proven Winners website that allows gardeners to weigh in on their favorites. We've received more than 6,000 ratings, and we pass along that information to growers and retailers so that you know what gardeners are thinking.

The scale used is:

1	2	3	4	5
Unsatisfied – will not grow again	Performed below expectations	Satisfactory performance – met my expectations, but not outstanding	Above average – among my favorites and I'd recommend to others	Outstanding. My favourite plant.

FLAMBE® *Chrysocephalum apiculatum*

LANDSCAPE 8-14"

The unique blooms of this plant are truly enchanting, with small sprays of tiny spherical flower heads that appear in clusters in the spring and summer. An exceptionally adaptable plant, this sun lover has a spreading habit and is drought tolerant and easy to grow.

Growing Tips for FLAMBE®

- Requires high light in production.
- Needs 150-200 ppm fertilizer for optimal growth.
- Pinch once, two weeks after liner planting. May be cut back if desired.
- B-9 at 2500 ppm can help to control stretch under low light.

Additional Culture Information for FLAMBE®

pH/EC:	6.0 - 6.5 / .6 - .9
Rooting Out Temperature:	65-72°
Growing Temperature:	65-72°
Holding Temperature:	50-60° outdoors
Water Requirements:	Dry to Moderate
Planting and Timing:	Spring through Fall Finish. Standard Plants Per Pot.
Finish Times in Weeks:	For 4-5", 5-6; for 6"/gallon, 6-8; for 8", 8-10; for 10-12", 10-12
Spring Outdoor Finish:	Do not finish outside

Notes:
Watch for aphids, leaf miners, and white flies. Can be susceptible to crown and stem rots if grown in cool, damp conditions. Maintain good air movement.
