VIGOR KEY – 1 to 4, with 1 representing the slower, smaller growers and 4 representing the quickest, largest growers. For combinations, choose varieties with the same vigor rating to ensure success.

Online Cultural Guide

When you have growing questions, you can access our **online growing guide** for answers.

By providing easy, 24/7 access to this information, we save you time – and money – so you can spend it tending to business and building that business, too.

Cultural Information and Growing Tips

To produce the highest quality plant material, growers must have detailed, specific crop culture. But to organize and sort the necessary information can be a challenge. What follows is a user-friendly yet comprehensive format developed by our propagators. Their system uses series charts that categorize the plant material according to basic environmental needs – pH, growing temperature, and fertilization. Besides enabling you to set up several different environments and group plants with similar basic requirements, you now have a single source of information about all Proven Winners® varieties. While you will still want to refer to specific crop culture for detailed information, together these two references should help you produce the best plants possible.

Proven Winners® Annuals and Graceful Grasses®

Growing Temp	A pH 5.5 - 5.8	B pH 5.8 - 6.2	C pH 6.0 - 6.5
A 55°-65° F (12-18° C)	Superbells® <i>Calibrachoa</i> , Sunsatia® and other <i>Nemesia</i> , Supertunia® <i>Petunia</i> , and Anytime® <i>Pansiola Viola</i>	Sundaze® <i>Bracteantha</i> , Butterfly <i>Argyranthemum</i> , Campfire™ Fireburst, Goldilocks Rocks® and Peter's Gold Carpet <i>Bidens</i> , Flying Colors® and Flirtation® <i>Diascia</i> , Karalee® and Stratosphere™ <i>Gaura</i> , Beth's Blue® <i>Isotoma</i> , Symphony, Soprano® and Bright Lights™ <i>Osteospermum</i> , Intensia® <i>Phlox</i> , Ablazin'® <i>Salvia</i> , and Playin' the Blues® <i>Salvia</i>	Quicksilver™ <i>Artemisia</i> , Pink Chablis® and Purple Chablis™ <i>Lamium</i> , Princess and Knight <i>Lobularia</i>
B 65°-72° F (18-22° C)	Pegasus® <i>Begonia</i> , Pink Wonder®, New Wonder®, and Whirlwind® <i>Scaevola</i> , and Snowstorm® <i>Sutera</i> (<i>Bacopa</i>)	Artist® <i>Ageratum</i> , Surefire® <i>Begonia</i> , Toffee Twist <i>Carex</i> , Señorita Rosalita®, Señorita Blanca®, Señorita Mi Amor® and Pequeña Rosalita® <i>Cleome</i> , Mystic and Dahlightful® <i>Dahlia</i> , Diamond Frost® and Diamond Delight® <i>Euphorbia</i> , Hello!™ <i>Gerbera</i> , Rockapulco® <i>Impatiens</i> , Blue Mohawk® <i>Juncus</i> , Laguna™ and Lucia® <i>Lobelia</i> , Charmed® <i>Oxalis</i> , Vertigo® <i>Pennisetum</i> , Sunbini <i>Sanvitalia</i> , Lemon Coral™ <i>Sedum</i> , Superbena®, Tukana® and Meteor Shower® <i>Verbena</i>	Artful® <i>Caladium</i> , Flambé® <i>Chrysocephalum</i> , ColorBlaze® <i>Coleus</i> , Baby Tut®, King Tut® and Prince Tut™ <i>Cyperus</i> , Boldly® and Timeless™ <i>Pelargonium</i> , Mojave® <i>Portulaca</i>
C 70°-75° F (21-24° C)		Angelface® <i>Angelonia</i> , Luscious® <i>Lantana</i> , GoldDust® <i>Mecardonia</i> , 'Fireworks', Purple Fountain Grass*, Red Riding Hood, and 'Sky Rocket' <i>Pennisetum</i> , Fiber Optic Grass <i>Scirpus</i> , Catalina® and Summer Wave® <i>Torenia</i>	Endless™ <i>Browallia</i> , Vermillionaire® <i>Cuphea</i> , Blue My Mind® <i>Evolvulus</i> , Illusion® and Sweet Caroline <i>Ipomoea</i> , Ruffles™ and Infinity® <i>New Guinea Impatiens</i>

In growing group codes, the first letter represents the Growing Temp and the second letter represents the pH.

Fertilizer rate for all plants listed above is 150-200 Constant Liquid Feed (CLF) with the following exceptions:

75-100 CLF

Endless™ *Browallia*

Artful® *Caladium*

100-150 CLF

Sundaze® *Bracteantha*

Toffee Twist *Carex*

Rockapulco® *Impatiens*

Ruffles™ and Infinity® *New Guinea Impatiens*

'Fireworks', Purple Fountain Grass, Red Riding Hood,

'Sky Rocket' and Vertigo® *Pennisetum*

Mojave® *Portulaca*

Sunbini *Sanvitalia*

Fiber Optic Grass *Scirpus*

Lemon Coral™ *Sedum*

100-200 CLF

Hello!™ *Gerbera*

130-150 CLF

Princess and Knight *Lobularia*

200-300 CLF

Toucan™ *Canna*

Señorita Rosalita®, Señorita Blanca®, Señorita

Mi Amor® and Pequeña Rosalita® *Cleome*

Illusion® and Sweet Caroline *Ipomoea*

Boldly® and Timeless™ *Pelargonium*

Intensia® *Phlox*

Supertunia® *Petunia*

Proven Winners® Perennials

Soil pH 5.5-5.8

Fruit Punch® *Dianthus* – Growing Temp 62-65°F (16-18°C)
Paint the Town *Dianthus* – Growing Temp 62-65°F (16-18°C)

Soil pH 5.5-6.2

Dolce® *Heuchera* – Growing Temp 65-72°F (18-22°C)
Primo™ *Heuchera* – Growing Temp 65-72°F (18-22°C)
Fun and Games® *Heucherella* – Growing Temp 65-72°F (18-22°C)
Summerific® *Hibiscus* – Growing Temp 70-75°F (21-24°C)
Magic Show® *Veronica* – Growing Temp 65-72°F (18-22°C)

Soil pH 5.5-6.5

'Jade Peacock' *Tiarella* – Growing Temp 62-68°F (16-20°C)

Soil pH 5.8-6.2

'Storm Cloud' *Amsonia* – Growing Temp 60-65°F (15-18°C)
Festival Star™ *Gypsophila* – Growing Temp 65-72°F (18-22°C)
'Tuscan Sun' *Heliopsis* – Growing Temp 55-65°F (12-18°C)
Sweet Romance® *Lavandula* – Growing Temp 60-65°F (15-18°C)
Amazing Daisies™ *Leucanthemum* – Growing Temp 55-65°F (12-18°C)
'Bottle Rocket' *Ligularia* – Growing Temp 68-72°F (20-22°C)
Pardon My and Leading Lady *Monarda* – Growing Temp 65-72°F (18-22°C)
Lemon Drop® *Oenothera* – Growing Temp 55-65°F (12-18°C)
Opening Act *Phlox* – Growing Temp 60-65°F (15-18°C)
Color Spires® *Salvia* – Growing Temp 55-65°F (12-18°C)

Soil pH 5.8-6.5

Decadence® *Baptisia* – Growing Temp 55-60°F (12-15°C)
Shadowland® *Hosta* – Growing Temp 55-60°F (12-15°C)
Prairiewinds® 'Desert Plains' *Pennisetum* –
Growing Temp 65-72°F (18-22°C)
'Denim 'n Lace' *Perovskia* – Growing Temp 68-74°F (20-23°C)
Rock 'n Grow® *Sedum* – Growing Temp 55-65°F (12-18°C)
'Charlotte's Web' *Tradescantia* –
Growing Temp 65-68°F (18-20°C)

Soil pH 6.0-6.5

Rainbow Rhythm® *Hemerocallis* – Growing Temp 55-65°F (12-18°C)
'Cat's Meow' *Nepeta* – Growing Temp 60-65°F (15-18°C)
Prairiewinds® *Panicum* – Growing Temp 65-75°F (18-24°C)
Prairiewinds® 'Blue Paradise' *Schizachyrium* – Growing Temp 68-75°F (20-24°C)

See perennial chart on p.194-195 for more detailed cultural information.

'Opening Act Blush' *Phlox*

Culture Notes and Groups:

pH:

A: pH 5.5-5.8
B: pH 5.8-6.2
C: pH 6.0-6.5

EC:

A: < .6
B: .6-.9
C: 1.0-2.0

Well-Balanced Fertilizer

N-P-K, 2:1:1.5 with adequate amounts of micronutrients
Low: 100-150 ppm Constant Liquid Feed
Medium: 150-200 ppm Constant Liquid Feed
High: 200-300 ppm Constant Liquid Feed

Fertilizer Disclaimer:

It is a good practice to clear water (leach) once every 3-4 times you water to lower soluble salt levels in the media. EC should also be monitored using weekly EC measurements.

Rooting Out Temperatures:

The first 10 days of container growth:
establishing root system to outside edge of container from the newly planted liner.
65-72° F (18-22° C)

Growing Temperatures:

Once roots are to the edge of the container – growing on the plant and bulking up foliage and flowers.
A: 55-65° F (12-18° C)
B: 65-72° F (18-22° C)
C: 70-75° F (21-24° C)

Night temperatures should be run 5° F (-15° C) lower than day temperatures

Holding Temperatures:

(For toning crops and/or for when you have to hold the crop when it is ready to go)

A: 40-50° F (4-10° F) outdoors*
B: 50-60° F (10-16° F)
C: Maintain Growing Temperatures

Light Levels:

High: Full sun crops need very high, bright light
Moderate: Sun to partial shade crops, High to moderate light
Low: Partial to full shade crops, Moderate to low light

* Sometimes this temperature is indoors when prompted not to finish the plants outdoors.

Moisture Regimes:

Transplant:

Water lightly to maintain moisture level within root zone until roots reach the side of the finished container. Once roots are developed to the side of the pot, see finish watering regime.

Finish Watering Regimes:

A: Dry to Moderate: Water thoroughly without over-saturating; keep moist during root development; allow soil surface to dry completely before watering after the crop is rooted to the edge of the pot.
B: Moderate to Moist: Water thoroughly without over-saturating; keep moist but not wet throughout entire growth cycle.
C: Moist to Wet: Water thoroughly and keep moisture constant throughout entire growth cycle.

Standard Plants Per Pot (PPP):

4-5": 1 ppp
6": 1-2 ppp
Gallon: 1-3 ppp
8": 3 ppp
10-12": 3-5 ppp

More cuttings per pot will yield faster finishing times. The higher light and temperatures experienced with summer production will dramatically reduce crop times.

Soil Mix for Container Growing:

Use a high-quality, professional grade soil mix that is adjusted to work with your water quality and growing style to help manage pH and water control.

Use a well-drained, high-quality professional grade soil mix. A peat-lite based soil or equivalent that gives you 60% organic matter and 40% secondary aggregates, such as perlite, rock-wool, coir, and/or bark, will provide proper soil porosity (well-drained soil).

Growth Regulator Disclaimer:

All PGR rates should be trialed by each individual grower before applications are made to entire crop to ensure desired results. All rates are given as a spray unless otherwise stated. Summer production may require higher PGR rates when crops are grown indoors. Proven Winners and its affiliates are not responsible for misapplication or misuse of these products. Check manufacturers' labels for approved rates and usage recommendations.

Pest Management:

A weekly scouting program is suggested. Monitor for common greenhouse pests. Treat accordingly, using label instructions. Be sure to rotate chemical classes to guard against development of resistance to chemicals.

Disease Management:

Treat with preventative broad spectrum fungicidal drench one week after transplant. Scout crops regularly (at least once a week) for disease development. Good air circulation, control of humidity, and good sanitation practices are critical. Good sanitation practices include keeping greenhouses clean at all times, eliminating weeds and debris, disinfecting equipment and greenhouses as often as possible, and keeping hose ends off the floor. Good water management practices are critical to healthy plant growth.

Day Neutral:

Ability of plants to flower freely regardless of day-length.

Vernalization:

Crop quality and flower number and presentation for perennial plants often will be improved with a cold treatment.

Spring Outdoor Finish:

Many Proven Winners crops can be finished outdoors under cool temperatures. Finishing under cool temperatures will allow you to expand production area, allows additional spacing inside greenhouse, allows additional turns, and improves quality of the product. Those plants finished outdoors will need additional time to finish. Specific finishing times are difficult to predict due to variability in weather patterns. Outdoor mum production areas are perfect to use as spring cold temperature finishing space.

Before plants are moved outside, they should be acclimated to colder temperatures using holding temperatures stated above.

Ideally, plants should be moved outdoors on an overcast day, with moderate temperatures, little wind, and no severe cold (freezing temperatures) forecasted for the next 24 hours. Often a full moon will mean clear skies, which will allow temperatures to drop more than expected. To maintain proper nutrition after a heavy rain, a light water application with 400-500 ppm N can be used on the already wet plants (this high fertilizer application on dry plants will result in burn).

Plants vary in ability to withstand cold temperature finishing. To help you manage when crops can be placed outdoors, we have split our plant material into 3 groups (Not all crops can be finished outdoors and will be noted as No). In the case of unusually cold temperatures, you should have frost protection measures ready (frost cloth, sprinklers, or ability to move plants under cover).

It is generally too cold for insects and disease to prosper. You should continue to scout for problems, however, chemical control measures probably won't be needed. Plant growth regulators will not be needed to control growth.

Growers who wish to try this method of finishing plants should trial a small portion of their plant material the first year to gain experience and comfort. Each year will differ and growers need to be prepared to adapt as conditions change.

A: First to go outside – 33-36° F (0-2° C):

These plants can be placed outside the earliest. When temperatures are not forecasted to drop below freezing for the next 10 days you should be able to move these plants outdoors. Should the temperature be forecasted to drop below 28° F (-2° C), protection measures should be taken.

B: Second to go outside – 38-42° F (3-5° C):

This is the second wave of plant material. These plants can be moved outside when odds are that temperatures are much less likely to drop below freezing. Protection measures should be taken for this group when temperatures are forecasted to reach 32° F (0° C). Average daily temperatures should be higher than when group A material was moved out. Generally, a few weeks after group A is moved out, group B can be moved outside.

C: Last to go outside – 45° F + (7° C +):

This is the third wave of plant material. These plants can be moved outside when temperatures are no longer likely to reach freezing. A hard frost will cause damage to this group. If a hard frost is forecasted, protection measures should be implemented.

For questions please call the grower hotlines at Four Star Greenhouses, Pleasant View Gardens, and EuroAmerican.
