**Garden Gem**  
*Lycopersicon esculentum*  
USVP  
This strongly disease resistant, semi-determinate tomato produces a high yield of juicy, smooth flavored, snack-sized fruits. Developed in the hot, humid South, resulting in heat tolerant plants that fruit over an extended period. Matures in 58 days, 2 weeks before Better Boy®.  

**Garden Treasure**  
*Lycopersicon esculentum*  
USVP  
This heat tolerant, vigorous, indeterminate tomato produces a heavy yield of large fruits that have versatile uses; delicious eaten fresh and used in sauces. Expect the flavor of an heirloom tomato with modern disease resistance. Matures in 72 days.

**Berried Treasure Red**  
*Fragaria ananassa*  
Vigor: 4  
Plants that serve a dual purpose of being ornamental and edible are wildly popular with consumers today, and Berried Treasure Red is no exception. This beautiful strawberry bears showy, semi-double, red flowers and sugary sweet, snack-sized fruits together all summer long. The plant has short runners, making it ideal for growing in patio pots. An everbearing, daylength neutral selection hardy in zones 4-9.  

**Growing Tips for FIRE AWAY™**  
- Best grown under warm conditions with long days. Don’t order it in until you can meet these conditions.  
- Grow in high light to avoid stretching.  
- Feed with 150-200ppm N. Do not overfeed this crop.  
- Allow plants to dry, but not wilt, between waterings.  
- Pinch liners at 1-2 weeks after transplant if needed.  
- In growing group BB (see page 145).  

**Seed Availability:** Sobkowich

**Growing Tips for BERRIED TREASURE™ Red**  
- 150 ppm N for optimal growth.  
- Pay close attention to watering. Strawberries do not tolerate wilting and the soil must be kept moist but not soggy.  
- Bright light and cool nights are best for peak flowering and fruit set.  
- Avoid high temperatures in production. Plants should be kept below 80°F to avoid a reduction in fruit quality.  
- Watch for spider mites, especially when humidity is low. Spray both the undersides and tops of the foliage.  
- Depending on conditions, allow about four weeks from flowering to ripened fruit.  
- In growing group BC (see page 145).  

**Notes:** Reduced runner formation results in a more mounding habit and more energy to put into flowers and fruit.

**Proven Harvest**
AMAZEL BASIL™ Ocimum

Superior resistance to downy mildew is the #1 reason to grow Amazel. It’s also quick to mature, up to three weeks faster than post-transplant seed-produced varieties. Once it reaches harvestable size, it remains in a vegetative state longer and sets sterile seed. Vigorous, large, well-branched plants produce a high yield. Truly a game-changing selection!

Growing Tips for AMAZEL BASIL™
- 150-200 ppm N for optimal growth.
- Pinch floral buds during early plant establishment to promote vegetative growth.
- Grow under high light conditions with good air circulation.
- Avoid temperatures below 40°F.
- Good water management practices are critical to healthy growth; avoid late day overhead watering.
- Employ good sanitation practices including keeping the greenhouse clean, eliminating weeds and debris, keeping hose-ends off the floor, and disinfecting equipment as often as possible.
- Scout for thrips and botrytis.
- In growing group BC (see page 145).

Seed Availability: Sobokwich

GOODHEARTED™ Lycopersicon esculentum

This compact cocktail tomato with a low mounding habit is ideal for hanging baskets and upright patio containers. Juicy, heart to pear-shaped fruits with a tender skin are slightly larger than cherry tomatoes. They have the perfect balance of sweet and acidic flavors. Plants are semi-determinate in the North and determinate in the South. Crop time from liner to red fruit is 65-72 days, making this a great early tomato for Northern gardeners. New this year.

Growing Tips for GOODHEARTED™
- 100-150 ppm N for optimal growth.
- A complete micronutrient balanced fertilizer is essential for best growth and flavor.
- Most tomatoes perform well with additional calcium, or a CalMag fertilizer.
- Avoid soil pH higher than 5.0 or micronutrient deficiencies will begin to show.
- Watch for signs of virus. Wash hands before handling the crop.
- Good air circulation is essential for pollination of flowers. Ensure good air flow through the greenhouse and keep humidity relatively low for best fruit set.
- In growing group BA (see page 145).
