Growing Tips for DOLCE®

- For best foliage coloration, avoid scorching light.
- Needs to 100-150 ppm N constant liquid feed and light shade for optimal growth.
- Botrytis can be a problem under cold, wet, low-light conditions.

Additional Culture Information for DOLCE®

- pH/EC: 6.0 - 6.5/1.5 - 2.5 pour-through method
- Rooting Out Temperature: 55-60º F (12-16° C)
- Growing Temperature: 55-65º F (12-18° C)
- Holding Temperature: 40-50º F (4-10° C) outdoors
- Water Requirements: Moderate
- Date to Plant: Late Summer to Late Spring
- Finish Time in Weeks: 72s - 4-5' : 5-6 wks or 6''/Gallon: 7-9 wks
  20s - 6''/Gallon: 6-8 wks
- Spring Outdoor Finish: Last to go outside
- Notes: No pinching or growth regulators needed. Finished spring plants can be moved outside to take advantage of cool temperatures for holding purposes and to allow foliage color to deepen.
Looking for larger, more vigorous varieties of coral bells that thrive in the landscape and very large containers? Primo® Heucheras are an ideal choice. Their _H. villosa_ parentage makes them naturally robust with good heat and humidity tolerance. Choose from a range of colorful options for sun and shade.

**PRIMO® ‘Black Pearl’ Heuchera**
The darkest Heuchera we’ve seen. Shiny jet black, large leaves measure up to 4” across, becoming ruffled as they mature and retaining their color even in full sun. White flowers with pink calyces appear in midsummer on vernalized plants.

**PRIMO® ‘Mahogany Monster’ Heuchera**
This super-sized Heuchera forms a robust clump of huge, glossy, mahogany red leaves. Creamy white flowers appear on exceptionally thick scapes in midsummer.

**PRIMO® ‘Peachberry Ice’ Heuchera**
The best we’ve seen in this color class. Leaves emerge apricot with a silver overlay in spring. Leaves expand and take on an intense apricot blush coloration in summer. Robust habit; fills containers fully and is stunning in landscapes.

**PRIMO® ‘Pretty Pistachio’ Heuchera**
The total package, offering bold chartreuse to lime green foliage and large clusters of pink flowers which appear continuously from midsummer to early fall. Flowers age to raspberry pink and dry in place on the stems.

**Growing Tips for PRIMO®**
- For best foliage coloration, avoid scorching light.
- Needs to 100-150 ppm N constant liquid feed and light shade for optimal growth.
- Botrytis can be a problem under cold, wet, low-light conditions.

**Additional Culture Information for PRIMO®**
- **pH/EC:** 6.0 - 6.5/1.5 - 2.5 pour-through method
- **Rooting Out Temperature:** 55-60º F (12-16º C)
- **Growing Temperature:** 55-60º F (12-16º C) differential
- **Water Requirements:** Moderate
- **When to Plant:** Late Summer to Late Spring
- **Finish Times in Weeks:**
  - 20s - 6”/Gallon: 6-8 wks
  - 25-26cm (8-10”)
  - Late Summer to Late Spring
- **Recommended Container:** Premium 1-Gallon

---

**Recommended Container:** Premium 1-Gallon
With rich-colored, long-blooming flowers all season, you can depend on this plant to perform in strides. And because it blooms the first year with little or no vernalization, it is a quick crop for growers, even those in the warmest climates. Sobkowich

Growing Tips for SWEET ROMANCE®
- Vernalization is not required for plants to flower. However, vernalized plants will come into flower faster and more consistently.
- Fresh plugs grown in spring will bloom the first year. However, plugs planted in late summer will result in fuller plants to sell in spring.
- For a quick finishing crop, start with bare root liners planted in spring.
- Lavender is a very light feeder and grows well under a constant liquid fertilizer program with rate of 50-75 ppm N.
- One pinch may be necessary for small plugs.
- Lavender prefers a cool start until roots are established.
- High light produces a better quality plant.

AWARD WINNER – SWEET ROMANCE®
- 3 Awards: Top Performer, Lucas Greenhouse; Top Performer, Cornell University; Top Performer, Raker Trial

Additional Culture Information for SWEET ROMANCE®
pH/EC: 5.8 - 6.2/1.25 - 1.75 pour-through method
Rooting Out Temperature: 66-68°F (18-20°C)
Growing Temperature: 60-65°F (15-18°C)
Holding Temperature: 40-50°F (4-10°C) outdoors
Water Requirements: Slightly Dry to Moist
When to Plant: Late Summer/Early Fall (fresh liners) or Spring (vernalized liners)
Finish Times in Weeks: 72s - 4-5" plugs or 8"/Gallon: 14-16 wks
Spring Outdoor Finish: First to go outside
Note: Lavender can be forced into bloom throughout the year. To force lavender, provide 10-hour days of light at 4-4 hour night interruption. Minimum light intensity is 10 foot candles. Watch for damping-off, leaf spot, and root rot.

SWEET ROMANCE® Lavandula angustifolia ‘kerlavangem’ USPP23001 Can4 906

AMAZING DAISSIES® ‘Banana Cream’
Leucanthemum superbum® USPP23175 Can4 203

AMAZING DAISSIES® ‘Banana Cream’
Leucanthemum superbum® USPP23175 Can4 203

This picture perfect daisy is a vigorous grower with a compact habit, excellent disease resistance, and axillary budding which results in a longer season of bloom. Large 4-5" flowers open lemon yellow and mature to creamy white on strong stems atop attractive deep green foliage. Sobkowich

AMAZING DAISSIES® ‘Banana Cream’
Leucanthemum superbum® USPP23175 Can4 203

Growth Tips for AMAZING DAISSIES®
- High light in production is essential.
- Avoid overwatering. Plants grown too dry will often be shorter and will have delayed flowering and fewer flowers.
- Cold vernalization adds to bud count, but warmer temperatures are needed to elongate flower stems.
- Needs 100-125 ppm N constant liquid feed for optimal growth.

AMAZING DAISSIES® ‘Banana Cream’
Leucanthemum superbum® USPP23175 Can4 203

Additional Culture Information for AMAZING DAISSIES®
pH/EC: 5.8 - 6.2/1.25 - 1.75 pour-through method
Rooting Out Temperature: 66-72°F (18-22°C)
Growing Temperature: 55-65°F (13-18°C)
Holding Temperature: 40-50°F (4-10°C) outdoors
Water Requirements: Moderate to Moist
When to Plant: Late Summer/Early Fall (fresh liners) or Spring (vernalized liners)
Finish Times in Weeks: 72s - 4-5" plugs or 6"/Gallon: 7-9 wks; 6"/Gallon: 8-9 wks
Spring Outdoor Finish: First to go outside
Note: For Daisy May, vernalization requirement is only 4 weeks. ‘Banana Cream’ has an obligate cold requirement for flowering; provides 6-9 weeks of cold when vernalizing. Scout regularly for aphids.

AMAZING DAISSIES® Daisy May®
Leucanthemum superbum® USPP2314 Can4 425

AMAZING DAISSIES® Daisy May®
Leucanthemum superbum® USPP2314 Can4 425

This plant is the gold standard in white shasta daisies, with beautiful 3" white flowers that form a solid dome of blooms. Daisy May is a compact, easy-to-grow perennial with a long bloom time. Deadheading results in multiple rounds of rebloom.
